

AT A GLANCE

THE ENGLISH JOURNAL CORPUS

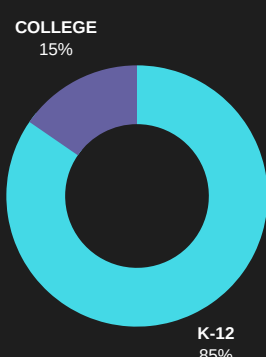

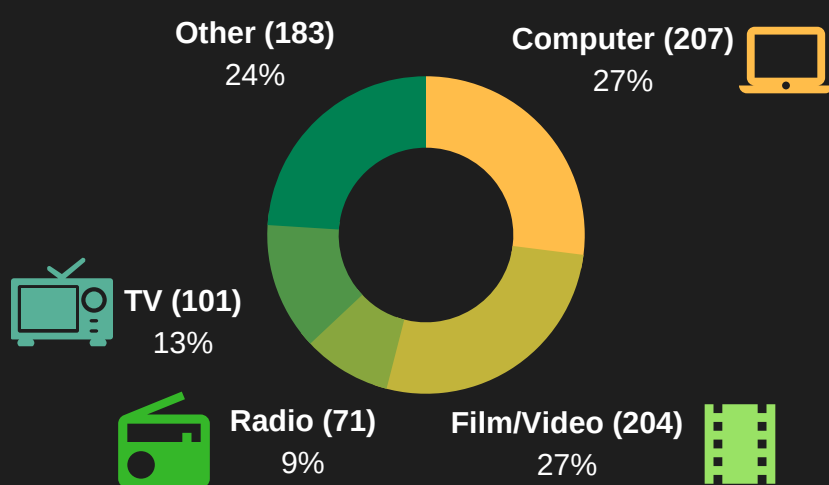

A closer look at technology in the English classroom

Information sourced from JSTOR | www.jstor.org/journal/englishj

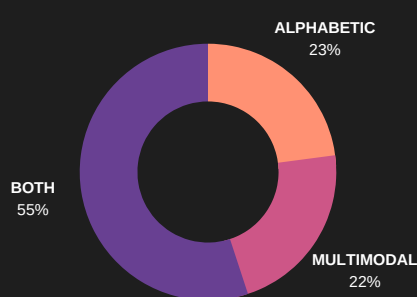

BY THE NUMBERS

766

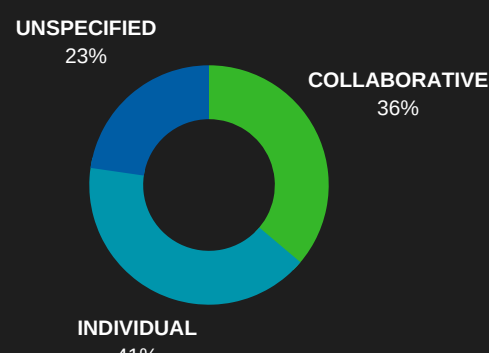

Overall, we identified 766 separate articles with a major focus on technology - here's how they break down.

LEVEL

OUTCOMES

COLLABORATION

THROUGH THE YEARS

1912 - 2012

Selected highlights curated from the corpus.

Every year in our century-long study included at least one article on technology, except years 1920 and 1921 - apparently, the authors of that period were uniquely traditionalist.

Patron Saint of Media Studies **Marshall McLuhan** is featured in the pages of English Journal - he co-authored an article on teaching students media literacy skills.

1912

The first article in our corpus - Vincil Courter's "Vitalizing Literature Study" - advocates for using **slide lanterns** to teach poetry, calling it "an excellent innovation."

1941

... And the infamous **December 7**, more precisely. After the 1930s saw a steady upward trend regarding teachers' interest in technology, this momentum stalled & nosedived for the years that the US was in WWII.

1995

The high-water mark in our corpus, with a total of **22** articles, most of which dealt, as expected, with the computer (although several surprisingly talked about printing presses).
